Post Production:
Environmental Responsibility Considerations

Intended for intermediate compliance programs

Key activity: Production development; inspection checklist; pre-purchase testing

Step-by-step approach to consider risk related to environmental responsibility during the post production stage.

- If not already completed, perform an environmental accountability audit to identify potential hazards.

- If not already completed, create a corrective action plan (CAP) for all failed inspections or product rejections
  - The CAP should outline appropriate steps to resolve the problem

- If not already completed, develop a vendor scorecard to measure performance across a wide range of importing scoring factors.
